

XIYORA Website Fix - Mind Map and Developer Brief V2

This brief explains how to use **xiyora_final_corrected_assets_v2_master.zip** to fix wrong, repeated, uncropped, and mismatched images on the XIYORA website, plus the mobile header / currency / theme UI issues.

Main Mind Map
• Asset truth source: use V2 folders, MANIFEST.csv, VALIDATION_SUMMARY.csv, and NEEDS_REVIEW_OR_MISSING_ASSETS.csv.
• Latex Materials: all 7 material source strips are split into exactly 3 separate gallery images each.
• Cushions: stop using one wedge image everywhere; use product-specific folders only.
• Mattresses/Toppers: fix switched Talalay/Standard mapping, Bay Window crop, and topper unrelated images.
• Pillows: replace duplicate thumbnails and wrong product images for Seahorse, Peanut, Spiky, Stomach, Throw, and U-Pillow.
• Mobile UI: improve logo spacing, currency dropdown with flags, and visible theme toggle.

1. Asset Pack Structure

Folder/File	Use
01_latex_materials/	Corrected material product galleries; each product has 3 split panels.
02_cushions/	Corrected cushion product folders; stop repeating wedge image.
03_mattresses_and_toppers/	Corrected mattress/topper galleries, including swap and excluded non-topper warning.
04_pillows/	Pillow replacement folders and existing product crop folders.
05_mobile_ui_header_currency_fix/	Text requirements for mobile header/currency/theme interface.
MANIFEST.csv	Source, purpose, confidence, and notes for each asset.
VALIDATION_SUMMARY.csv	Quick gallery count check.
NEEDS_REVIEW_OR_MISSING_ASSETS.csv	Items that must not be guessed or faked.

Strict image rules
• Do not use any old website image as truth if it conflicts with V2 folders.
• Do not use 00_source_* files as gallery slides; they are reference strips/pairs.
• Use only 01_, 02_, 03_ gallery panel files in product carousels.
• Do not fill a missing gallery slot using an unrelated product image.
• If a file is marked EXCLUDED, do not use it on that product page.

2. Section Fixes

Latex Material Section

- Problem: material products showed wrong images and unsplit 3-panel strips.
- Fix: use each product folder in 01_latex_materials/.
- Each material product must use 01_gallery_panel_1.png, 02_gallery_panel_2.png, and 03_gallery_panel_3.png.
- Never show 00_source_3_panel_strip.webp as a visible carousel image.

Cushion Section

- Problem: one wedge/triangle image was reused across many cushion products.
- Fix: use only the matching folder inside 02_cushions/.
- The wedge visuals are now under dunlop_triangle_back_cushion_or_reading_wedge, not chunk.
- Bubble and Chunk use the closest available chunky/bubble source; if they are separate SKUs, request distinct images.

Mattresses and Toppers

- Talalay Latex Mattress and Dunlop Standard Mattress were identified as switched; follow the V2 folder names.
- Bay Window Mattress uses split panels with divider removed.
- Latex Topper folder excludes the non-topper bay-window measurement image.

Pillow Section

- Replace duplicate/repeated images for Seahorse, Peanut Massage, and Spiky Massage.
- Fix wrong images on Stomach Pillow, Throw Pillow, and U-Pillow pages.
- If only 1-2 product-specific images exist, use 1-2 correct images instead of 3 wrong images.

3. Mobile Header / Currency / Theme UI Fix

Observed mobile UI issues

- XIYORA logo/name placement feels cramped and should be slightly better aligned on mobile.
- Currency selector currently opens as a large system-style popup and looks poor.
- Currency selector should show a real flag next to the currency code.
- Light/dark theme toggle is too subtle and should be more visible.

Required mobile UI behavior

- Closed currency pill shows flag + code, e.g. India flag + INR.
- Dropdown is compact, inline, anchored below currency pill, and styled in XIYORA dark/gold luxury style.
- Dropdown options: INR, USD, AED, EUR, GBP, SGD, AUD with correct flags.
- Dropdown closes on selection or outside click.
- Theme toggle has better contrast, hit area, spacing, and icon visibility.

4. Final Test Checklist

Before marking complete
• All Latex Material products show three correct split images.
• No cushion product reuses the wedge image unless it is the triangle/reading wedge product.
• Talalay and Dunlop Standard are no longer switched.
• Bay Window has no visible white crop/divider line.
• Latex Topper has no unrelated bay-window image in the carousel.
• Pillow duplicate and wrong-image issues are corrected.
• Thumbnails match actual selected images.
• Mobile header looks premium and balanced.
• Currency dropdown is compact and flag-based.
• Theme toggle is visible and usable.
• Final report includes changed files and product-by-product image mapping.

Do not guess. If a product-specific source image is missing, report it instead of applying the wrong asset.
